Overlay MatchTimer — User Guideline

Version: 1.7.6

Audience: Stats Perform / RunningBall match analysts

Primary product: Chrome MV3 extension (`Overlay-chrome-extension/`)

Legacy companion: `OverlayMatchTimer.html` (local dashboard; still documented for Tier-12 / URL paste)

Confidentiality: The historical PDF (`Overlay MatchTimer Guideline.pdf`) is marked Stats Perform Security Level 2 — Restricted. This Markdown is the **editable maintenance source** for regenerating the PDF. Classification and distribution must be confirmed by the owner / Stats Perform before sharing outside the intended internal audience.

1. General information

1.1 Revision history

Revision	Notes	Author	Date
1.0.0	Original Guideline PDF (HTML dashboard + early Inplay extension)	Vasco Oliveira	05 Jul 2026
1.7.0	Editable Markdown; extension-first; temporary Kickoff sync Customize prototype	Maintainers	13 Nov 2026
1.7.1	Kickoff sync UI removed / feature flagged off; Guideline no longer documents sync as a current feature	Maintainers	13 Nov 2026
1.7.2	Perf audit (redesign scrubber micro-opt only); General Shuttle diagram action labels without Btn 1–5 numbers	Maintainers	13 Nov 2026
1.7.3	Shuttle hit areas; more-panel expands up (bar fixed); LIVE hidden on local; eye = Auto hide toggle	Maintainers	13 Nov 2026
1.7.4	More-panel inside card (grows UP); timeline period bands + hover tip; instant scrub fill; no Seek label	Maintainers	13 Nov 2026
1.7.5	Timeline bookmarks; match-clock tip; single fill; click-to-toggle; unclipped tips; auto-hide idle fix; more tip	Maintainers	13 Nov 2026
1.7.6	Hover period ticks + short labels; snap tip/seek; edge-clamped tips; Clear timer tip	Maintainers	13 Nov 2026

1.2 Glossary

Term	Meaning
Overlay MatchTimer	Match clock + HUD overlay for analysis video
HUD	On-video heads-up display (clock, timeline, controls)
Kick-off / kickoff	Video time (or PDT) reference that anchors match minutes
ShuttleXpress	Contour USB jog/shuttle; WebHID after user enables
Customize	Toolbar popup tab for clock, shortcuts, ShuttleXpress

1.3 What this Guideline covers

Area	Covered?
Install unpacked Chrome extension	Yes
InplayIP / Examino / local player	Yes
Match clock / kick-off calibration	Yes
Hotkeys, timeline, OSD	Yes
ShuttleXpress	Yes
Customize (clock / shortcuts / Shuttle)	Yes
Team Kickoff sync	**No** — not a current feature (planned later; see maintainer docs only)
Store publishing	No — `store/PUBLISHING.md`

2. Installing the Chrome extension

1. Obtain the release zip (e.g. `OverlayMatchTimer-v1.7.6.zip`) and extract it.
2. Open `chrome://extensions` → enable **Developer mode**.
3. **Load unpacked** → select `Overlay-chrome-extension/` (contains `manifest.json`).
4. Confirm the card shows version **1.7.6** and no errors.
5. Pin the toolbar icon (slash + **20:08** badge).

Chrome is the supported browser.

3. Online streams (extension)

3.1 InplayIP

Open a Review / DVR session on `*.inplayip.tv`. The HUD injects over the Video.js player.

3.2 Examino

Open `examino.statsperform.io/play/dvr/…` or `/play/vod/…`. The overlay waits for OpenPlayer's `<video>`, hides native chrome, and offers Source (DVR/VOD) + Auto-switch to VOD in the in-panel settings.

4. Local / offline video

4.1 Extension local player (preferred)

1. Toolbar popup → **Open local player**.
2. Choose a file or drag-and-drop.
3. Shuttle enablement is **per window** on local player.

4.2 Legacy HTML dashboard

`OverlayMatchTimer.html` remains for historical Tier-12 workflows and pasting Xeatre/Examino DVR URLs.

5. Match clock synchronization

1. Seek to the kick-off frame for the period (1st, 2nd, Custom 1/2).
2. Select the period in the half dropdown.
3. Click **Set Kick-off** (or press **K**).
4. Use ±1s / ±5s offset nudges if needed.
5. Clear with the reset control when starting a new match.

Click the HUD clock to type a match time (`45`, `45.30`, `45:30`, etc.).

6. Navigation & hotkeys

Action	Default shortcut
Play / Pause	Space
Skip ±2s	← / →
Skip ±10s	Shift + ← / →
Skip ±2m	Ctrl + ← / →
Frame ±	↑ / ↓
Speed – / + / 1×	Z / C / X
Mark kick-off	K
Go Live	L
Hide controls	H

Defaults are rebindable under **Customize** → **Shortcuts**.

7. ShuttleXpress

1. Connect Contour ShuttleXpress over USB.
2. On the page HUD, enable **ShuttleXpress** (per window on local player).
3. Accept the browser device chooser.
4. Remap under **Customize** → **ShuttleXpress**. Auto pause on Alt+Tab never applies while Shuttle is on.

8. Customize & General (toolbar popup)

General: Open local player, Auto pause on Alt+Tab (default off), live shortcut list, Shuttle diagram summary (action labels only — no Btn 1–5 numbers; those appear under Customize → ShuttleXpress).

Customize:

Section	Default
Match clock	Open
Shortcuts	Collapsed
ShuttleXpress	Collapsed

Reset all customizations restores clock, shortcuts, and Shuttle defaults.

9. Legacy URL workflows (HTML)

Xeatre / Examino “copy DVR URL → paste into dashboard” steps from Guideline 1.0.0 still apply to `OverlayMatchTimer.html`. The extension injects on Examino play URLs and InplayIP directly.

10. Troubleshooting (short)

Symptom	Try
No HUD on Examino	Confirm `/play/dvr/` or `/play/vod/` URL; wait for video; reload
No HUD on Inplay	Confirm Review/DVR session; reload unpacked
Hotkeys do nothing	Click the page; check Customize bindings
Shuttle won’t pair	Toggle off/on; re-plug USB; allow device

11. Updating this Guideline (maintainers)

File	Role
`docs/guideline/GUIDELINE.md`	Editable source
`scripts/generate-guideline-pdf.py`	Regenerates root PDF
`TESTING-TUESDAY.md`	Smoke checklist for a build

When a feature changes: update this file + Tuesday sheet + screenshots + regenerate PDFs + include both PDFs in the release zip.

```
python3 scripts/generate-guideline-pdf.py
python3 scripts/generate-testing-tuesday-pdf.py
```

12. Disclaimer

Confirm security marking and distribution with the owner before sharing. Do not paste credentials into this document or commit them to git.
