Overlay MatchTimer — User Guideline

Version: 1.7.0

Audience: Stats Perform / RunningBall match analysts

Primary product: Chrome MV3 extension (`Overlay-chrome-extension/`)

Legacy companion: `OverlayMatchTimer.html` (local dashboard; still documented for Tier-12 / URL paste)

Confidentiality: The historical PDF (`Overlay MatchTimer Guideline.pdf`) is marked Stats Perform Security Level 2 — Restricted. This Markdown is the **editable maintenance source** for regenerating the PDF. Classification, disclaimer wording, and external distribution must be confirmed by the owner / Stats Perform before sharing outside the intended internal audience.

1. General information

1.1 Revision history

Revision	Notes	Author	Date
1.0.0	Original Guideline PDF (HTML dashboard + early Inplay extension)	Vasco Oliveira	05 Jul 2026
1.7.0	Editable Markdown source; Chrome extension first; Customize, local player, optional Kickoff sync (default off)	Maintainers	13 Nov 2026

1.2 Glossary

Term	Meaning
Overlay MatchTimer	Match clock + HUD overlay for analysis video
HUD	On-video heads-up display (clock, timeline, controls)
Kick-off / kickoff	Video time (or PDT) reference that anchors match minutes
ShuttleXpress	Contour USB jog/shuttle; WebHID after user enables
Kickoff sync	Optional team share of kickoff references via a user-owned Supabase project (off by default)
Customize	Toolbar popup tab for clock, shortcuts, Shuttle, kickoff sync

1.3 What this Guideline covers

Area	Covered?	Notes
Install unpacked Chrome extension	Yes	§2
InplayIP overlay	Yes	§3
Examino DVR/VOD overlay	Yes	§3
Local player / offline files	Yes	§4
Match clock / kick-off calibration	Yes	§5
Hotkeys, timeline, OSD	Yes	§6
ShuttleXpress	Yes	§7
Customize (clock / shortcuts / Shuttle)	Yes	§8
Optional Kickoff sync (Supabase)	Yes	§9 — default **off**
Xeatre URL paste (legacy HTML)	Brief	§10 — Xeatre injector still out of scope
Store publishing / legal	No	See `store/PUBLISHING.md`
Developer build / e2e	No	See root `README.md`

Screens / figures in the historical PDF (FIGURE 1–29) map mainly to the **HTML dashboard** and early Inplay load steps. Prefer regenerating screenshots from the live extension (popup, Examino, Inplay, local player) when updating this guide — see §12.

2. Installing the Chrome extension

1. Obtain the release zip (e.g. `OverlayMatchTimer-v1.7.0.zip`) and extract it.
2. Open `chrome://extensions` → enable **Developer mode**.
3. **Load unpacked** → select the `Overlay-chrome-extension/` folder (the one that contains `manifest.json`).
4. Confirm the card shows version **1.7.0** and no errors.
5. Pin the toolbar icon (slash + **20:08** badge).

Chrome is the supported browser.

3. Online streams (extension)

3.1 InplayIP

Open a Review / DVR session on `*.inplayip.tv`. The HUD injects over the Video.js player. Use the same kick-off, hotkeys, and Shuttle behaviour as on other surfaces.

3.2 Examino

Open `examino.statsperform.io/play/dvr/…` or `/play/vod/…`. The overlay waits for OpenPlayer's `<video>`, hides native chrome, and offers Source (DVR/VOD) + Auto-switch to VOD in the in-panel settings.

4. Local / offline video

4.1 Extension local player (preferred)

1. Open the toolbar popup → **Open local player**.
2. Choose a file or drag-and-drop onto the window.
3. Shuttle enablement is **per window** (session only) so a shared upper monitor and a personal window do not fight.

4.2 Legacy HTML dashboard

`OverlayMatchTimer.html` remains for historical Tier-12 workflows and pasting Xeatre/Examino DVR URLs. Prefer the extension local player for day-to-day offline work.

5. Match clock synchronization

1. Seek to the kick-off frame for the period (1st, 2nd, Custom 1/2).
2. Select the period in the half dropdown.
3. Click **Set Kick-off** (or press **K**).
4. Use ±1s / ±5s offset nudges if the whistle frame needs a trim.
5. Clear with the reset control when starting a new match.

Timeline ticks appear per period (1st / 2nd / C1 / C2). Click the HUD clock to type a match time (`45`, `45.30`, `45:30`, etc.).

6. Navigation & hotkeys

Action	Default shortcut
Play / Pause	Space
Skip ±2s	← / →
Skip ±10s	Shift + ← / →
Skip ±2m	Ctrl + ← / →
Frame ±	↑ / ↓
Speed – / + / 1×	Z / C / X
Mark kick-off	K
Go Live	L
Hide controls	H

Defaults are rebindable under **Customize** → **Shortcuts**.

7. ShuttleXpress

1. Connect the Contour ShuttleXpress over USB.
2. On the page HUD, enable **ShuttleXpress** (per window on local player).
3. Accept the browser device chooser.

4. Defaults: Btn3 Play/Pause; Btn1 –2m; Btn2 –10s; Btn4 +10s; Btn5 +2m; Jog frames; ring scrub.
5. Remap under **Customize** → **ShuttleXpress** (diagram + rows). Auto pause on Alt+Tab never applies while Shuttle is on.

8. Customize & General (toolbar popup)

General: Open local player, Auto pause on Alt+Tab (default off), live shortcut list, Shuttle diagram summary.

Customize (collapsible sections):

Section	Default	Purpose
Match clock	Open	Position / size / style
Shortcuts	Collapsed	Rebind + conflict warnings
ShuttleXpress	Collapsed	Skip seconds, Play/Pause button, jog/ring
Kickoff sync	Collapsed	Optional team sync — **toggle off by default**

Reset all customizations restores clock, shortcuts, Shuttle, and turns Kickoff sync off (clears stored URL/key/room).

9. Optional Kickoff sync (v1.7.0, default off)

Share kickoff / clock-reference values with colleagues on the **same match room**.

- **Off (default):** no sync network requests; no optional Supabase host permission used.
- **On:** user enters their own Supabase **Project URL** + **anon key** (stored only in `chrome.storage.local`). Chrome asks for host access to that origin when enabling. Optional **Room id** overrides the auto key derived from the page URL.
- Owner setup (SQL, RLS): see `supabase/SETUP.md`. Do **not** put service-role keys in the extension. Do **not** commit secrets.

Risks (plain language): anyone with the shared anon key can read/write every row in that project's `kickoff_sync` table — treat it as a private team room.

10. Legacy URL workflows (HTML)

Xeatre / Examino "copy DVR URL → paste into dashboard" steps from Guideline 1.0.0 still apply to `OverlayMatchTimer.html`. The extension injects on Examino play URLs and InplayIP directly; Xeatre content-script injection remains out of scope until material is provided.

11. Troubleshooting (short)

Symptom	Try
No HUD on Examino	Confirm `/play/dvr/` or `/play/vod/` URL; wait for video; reload
No HUD on Inplay	Confirm Review/DVR (seekable) session; reload unpacked
Hotkeys do nothing	Click the page once; check Customize bindings; Examino uses capture-phase keys
Shuttle won't pair	Toggle off/on; re-plug USB; allow device in chooser
Sync does nothing	Confirm toggle on, URL + anon key, host permission granted, same Room id / match page

12. Updating this Guideline (maintainers)

Where the source lives

File	Role
`docs/guideline/GUIDELINE.md`	**Editable source** (this file)
`docs/guideline/_extract-from-pdf-1.0.0.txt`	Raw text extract from historical PDF (reference only)
`Overlay MatchTimer Guideline.pdf`	Generated / published PDF at repo root
`scripts/generate-guideline-pdf.py`	Regenerates the PDF from the Markdown

Checklist when a feature changes

1. Update the matching section(s) in `GUIDELINE.md` (and revision table).
2. Update `TESTING-TUESDAY.md` rows if analysts should re-verify the change.
3. Capture fresh screenshots (popup / HUD) into `docs/guideline/screenshots/` or `store/screenshots/` as appropriate.
4. Run `python3 scripts/generate-guideline-pdf.py` → refresh root PDF.
5. Bump extension version only if shipping code; zip includes both PDFs (Guideline + TESTING-TUESDAY).

How TESTING-TUESDAY relates

`TESTING-TUESDAY.md` (+ `.pdf`) is a **~15 minute smoke checklist** for a build, not the full Guideline. Keep them aligned on version number and new high-risk behaviours (e.g. Kickoff sync default off). Guideline = how to use; Tuesday sheet = did this build still work.

Regenerating the PDF

```
python3 scripts/generate-guideline-pdf.py
# writes: Overlay MatchTimer Guideline.pdf
```

Optional: `python3 scripts/generate-testing-tuesday-pdf.py` for `TESTING-TUESDAY.pdf`.

13. Disclaimer

This document may contain proprietary information of Stats Perform. Confirm the correct security marking and distribution list with the owner before sharing. Optional Kickoff sync credentials and project URLs are user-supplied and must never be pasted into this document or committed to git.
