Overlay MatchTimer — Tuesday manual test (~15 min)

Build: v2.0.0 · **PC:** work machine · **Date:** _____ · **Tester:** _____

Install from the full zip (`OverlayMatchTimer-v2.0.0-full.zip` → `OverlayMatchTimer-v2.0.0/Overlay-chrome-extension/`). Load unpacked in `chrome://extensions` (Developer mode). Do not use an old folder.

Mark each row: `[ ]` → `[x]` when pass. Use **Notes** for anything odd (screenshot path / console error).

0. Install & shell

#	Action	Expected	✓	Notes
0.1	Load unpacked from zip's `Overlay-chrome-extension`	Extension shows **2.0.0**, no errors on card	[ ]	
0.2	Check toolbar / extensions icon	Slash + **20:08** badge top-left (v2) on dark tile	[ ]	
0.3	Open popup	Header: SP logo with **20:08** badge + OverlayMatchTimer; footer `v2.0.0`	[ ]	
0.4	Customize tab	Sections: Match clock, Shortcuts, ShuttleXpress only — **no Kickoff sync**	[ ]	

1. InplayIP

Open a live/VOD InplayIP match page with the overlay injected.

#	Action	Expected	✓	Notes
1.1	Confirm HUD	Clock + control panel appear over video	[ ]	
1.2	Click clock → type `45` → Enter	Clock shows **45:00** (or running from that point)	[ ]	
1.3	Edit: `45.30`	Accepts → **45:30**	[ ]	
1.4	Edit: `45,30`	Accepts → **45:30**	[ ]	
1.5	Edit: `45 30`	Accepts → **45:30**	[ ]	
1.6	Edit: `45:70`	Stays open; **thin red outline**; hint **Seconds 0–59**; no commit	[ ]	
1.7	Press **Esc** while editing	Edit cancels; previous valid time restored	[ ]	
1.8	Popup → Customize → move clock through 6 positions × sizes S–XL × Box/Pill/Minimal	Clock stays clear of OSD/timeline; style matches choice	[ ]	
1.9	Speed row / **eye** Auto hide toggle	Eye-off = Auto hide on; eye = off; click does **not** hide panel; tooltip `Auto hide: on/off`	[ ]	
1.9b	Hover **Play**, skip (±2s/±10s/±2m), lower speed chips	**No** hover tooltip (self-explanatory). Frame ± / top speed select still tip	[ ]	
1.10	Auto hide **ON**: leave mouse still over video ~3s	Controls + timeline **fade**; move mouse → they return	[ ]	
1.11	Auto hide **OFF**: leave mouse still over video ~3s	Controls **stay** visible	[ ]	
1.12	Hover volume slider / top-row icons	Tip fully visible (not clipped by card top); near top of player tips flip below	[ ]	
1.13	Hover **chevron** collapsed / expanded	Tip **More controls** / **Less controls**	[ ]	
1.14	Click **up** chevron (more)	Same glass card; extras in the **middle** (under top row); transport/speeds **stay put**; card top rises	[ ]	
1.15	Hover timeline (with kick-offs set)	At rest: no markers. On hover: thin ticks + tiny `1st/2nd/…` below; tip above = period · match clock; near tick snaps + click seeks	[ ]	
1.15b	Hover Open file / Shuttle / Clear timer (X) tips	Fully visible, edge-clamped; Open file = `Open local or NAS video`; X = `Clear timer`	[ ]	
1.16	Click ahead on timeline	Thumb **and** filled bar jump together; fill stays one colour in 2nd half	[ ]	
1.17	Click empty video (not controls)	Toggles play/pause (local / Examino / InPlay)	[ ]	
1.18	Press **H**	Still hides/shows controls completely (original hotkey)	[ ]	
1.19	Trigger an OSD (skip / play)	OSD appears **at top**, not over clock oddly	[ ]	

2. Examino (DVR / VOD)

#	Action	Expected	✓	Notes
2.1	Open Examino DVR or VOD play URL	Overlay injects; clock + panel work	[ ]	
2.2	Repeat clock edit smoke (`45`, `45.30`, invalid `45:70`, Esc)	Same as InplayIP	[ ]	

2.3	Kick-off / sync controls you normally use	Still set clock vs video as before	[ ]	

3. Local player

#	Action	Expected	✓	Notes
3.1	Popup → **Open local player**	New window; same HUD chrome	[ ]	
3.2	Open a local / NAS-mapped file	Playback + clock + shortcuts work; **no LIVE** button	[ ]	
3.3	Enable ShuttleXpress only on this window if testing device	Toggle stays per-window	[ ]	

4. Customize — shortcuts

#	Action	Expected	✓	Notes
4.1	Rebind Play/Pause to another key	Binding updates; works on page	[ ]	
4.2	Bind two actions to the same key	Inline **conflict** warning	[ ]	
4.3	Use a native-ish shortcut (e.g. space) while focused on page	Extension override still fires when expected	[ ]	
4.4	**Reset all shortcuts**	Defaults restored	[ ]	

5. ShuttleXpress (device + Customize)

#	Action	Expected	✓	Notes
5.1	Enable Shuttle on page; pair device	Connects; cheatsheet/controls as usual	[ ]	
5.2	Press Btn 1–5, turn Jog, rock Shuttle ring	Correct skip / play-pause / frame / scrub; **OSD** labels unchanged	[ ]	
5.3	Customize: click **Btn 5** / **Jog disc** / **ring band** (not only the outline)	Correct piece + row highlight; generous hit area; **Btn numbers 1–5 visible** on Customize diagram	[ ]	
5.4	Focus **Jog** select	**Only** Jog highlighted on SVG + row	[ ]	
5.5	Move Play/Pause to **Btn 5**	Btn 5 = Play/Pause (no number field); Btn 3 = **+2m**; General diagram labels match	[ ]	
5.6	Press physical Btn 5 / Btn 3	5 toggles play; 3 skips +2m; OSD correct	[ ]	
5.7	**Reset all ShuttleXpress**	Btn 3 Play/Pause; 1 −2m; 2 −10s; 4 +10s; 5 +2m	[ ]	
5.8	Auto pause on Alt+Tab **ON**, Shuttle **enabled** on page	Alt+Tab does **not** pause (Shuttle skip path)	[ ]	
5.9	Shuttle **off**, Auto pause **ON**	Alt+Tab pauses; return resumes only if we paused it	[ ]	

6. General tab & reset

#	Action	Expected	✓	Notes
6.1	Default General	Actions open; Shortcuts + Shuttle **collapsed**	[ ]	
6.2	Open ShuttleXpress	**Diagram only** (live action labels: −2m / −10s / Play/Pause / +10s / +2m / Jog / Shuttle ring); **no** Btn numbers 1–5 around the ring	[ ]	
6.3	**Reset all customizations**	Clock, shortcuts, Shuttle back to defaults	[ ]	

7. Performance — Chrome Task Manager (work PC)

Use a real InPlay or Examino tab (not the mock). Record numbers in Notes.

#	Action	Expected	✓	Notes
7.1	Open Task Manager (`Shift+Esc` in Chrome) with **extension disabled** on the match tab; watch ~60 s while video plays	Note tab CPU % and JS memory	[ ]	OFF: CPU ___ % · JS ___ MB
7.2	Enable extension; reload match tab; HUD visible; watch ~60 s	CPU/JS higher than OFF is OK; no runaway climb; UI stays smooth	[ ]	ON: CPU ___ % · JS ___ MB
7.3	Optional: leave tab open ~5 min with HUD	Memory does not climb without bound (GC noise OK)	[ ]	

Directionality from the v1.7.2 lab harness: Examino ON ■ OFF for script time; InPlay ON also clearly above OFF. Absolute % on your PC will differ — see `PERFORMANCE.md`.
